PRESS RELEASE

**Paolo Benanti wins the seventh edition  
of the International Prize "Economy and Society"  
promoted by the Centesimus Annus pro Pontifice Foundation**

With his study "**Human in the Loop. Human decisions and artificial intelligence**" (Mondadori University) **Father Paolo Benanti** won the seventh edition of the International Prize "Economy and Society" promoted by the Centesimus Annus pro Pontifice Foundation.

The initiative set up twelve years ago is held on a biennial basis with the aim to award essays which stand out for their original contribution to in-depth analysis of the knowledge and application of the Social Doctrine of the Church having a solid doctrinal basis, whilst accessible to the wider public.

Artificial intelligence is present in every aspect of daily life and, as Paolo Benanti comments on his website ([www.paolobenanti.com](http://www.paolobenanti.com)) which is dedicated to the themes of ethics, bioethics and technology: "I try to focus on the ethical and anthropological significance of technology for Homo sapiens: we are a species that has inhabited the world for 70,000 years, transforming it; the human condition is a **techno-human** one ....".
