◆ **Messaggio del Santo Padre ai partecipanti alla Seconda Conferenza Annuale su Intelligenza Artificiale, Etica e Governance d'Impresa**

Pubblichiamo di seguito il Messaggio che il Santo Padre Leone XIV ha inviato ai partecipanti alla Seconda Conferenza Annuale su Intelligenza Artificiale, Etica e Governance d'Impresa (Roma, 19-20 giugno 2025):

Messaggio

On the occasion of this Second Annual Rome Conference on Artificial Intelligence I extend my prayerful good wishes to those taking part. Your presence attests to the urgent need for serious reflection and ongoing discussion on the inherently ethical dimension of AI, as well as its responsible governance. In this regard, I am pleased that the second day of the Conference will take place in the Apostolic Palace, a clear indication of the Church's desire to participate in these discussions that directly affect the present and future of our human family.

Together with its extraordinary potential to benefit the human family, the rapid development of AI also raises deeper questions concerning the proper use of such technology in generating a more authentically just and human global society. In this sense, while undoubtedly an exceptional product of human genius, AI is “above all else *a tool*” (POPE FRANCIS, *Address at the G7 Session on Artificial Intelligence*, 14 June 2024). By definition, tools point to the human intelligence that crafted them and draw much of their ethical force from the intentions of the individuals that wield them. In some cases, AI has been used in positive and indeed noble ways to promote greater equality, but there is likewise the possibility of its misuse for selfish gain at the expense of others, or worse, to foment conflict and aggression.

For its part, the Church wishes to contribute to a serene and informed discussion of these pressing questions by stressing above all the need to weigh the ramifications of AI in light of the “integral development of the human person and society” (Note *Antiqua et Nova*, 6). This entails taking into account the well-being of the human person not only materially, but also intellectually and spiritually; it means safeguarding the inviolable dignity of each human person and respecting the cultural and spiritual riches and diversity of the world’s peoples. Ultimately, the benefits or risks of AI must be evaluated precisely according to this superior ethical criterion.

Sadly, as the late Pope Francis pointed out, our societies today are experiencing a certain “loss, or at least an eclipse, of the sense of what is human,” and this in turn challenges all of us to reflect more deeply on the true nature and uniqueness of our shared human dignity (*Address at the G7 Session on Artificial Intelligence*, 14 June 2024). AI, especially Generative AI, has opened new horizons on many different levels, including enhancing research in healthcare and scientific discovery, but also raises troubling questions on its possible repercussions on humanity’s openness to truth and beauty, on our distinctive ability to grasp and process reality. Acknowledging and respecting what is uniquely characteristic of the human person is essential to the discussion of any adequate ethical framework for the governance of AI.

All of us, I am sure, are concerned for children and young people, and the possible consequences of the use of AI on their intellectual and neurological development. Our youth must be helped, and not hindered, in their journey towards maturity and true responsibility. They are our hope for the future, and society’s well-being depends upon their being given the ability to develop their God-given gifts and capabilities, and to respond to the demands of the times and the needs of others with a free and generous spirit. No generation has ever had such quick access to the amount of information now available through AI. But again, access to data — however extensive — must not be confused with intelligence, which necessarily “involves the person’s openness to the ultimate questions of life and reflects an orientation toward the True and the Good” (*Antiqua et Nova*, No. 29). In the end, authentic wisdom has more to do with recognizing the true meaning of life, than with the availability of data.

In this light, dear friends, I express my hope that your deliberations will also consider AI within the context of the necessary intergenerational apprenticeship that will enable young people to integrate truth into their moral and spiritual life, thus informing their mature decisions and opening the path towards a world of greater solidarity and unity (cf. *ibid.*, 28). The task set before you is not easy, but it is one of vital importance. In thanking you for your efforts now and in the future, I cordially invoke upon you and your families the divine blessings of wisdom, joy and peace.

From the Vatican, 17 June 2025

LEO PP. XIV
